

Marek Kacprzak

ENGINEERING MANAGER | AI, DATA PLATFORMS & DISTRIBUTED SYSTEMS

Warsaw, Poland

☎ +48 601 199 008 | ✉ kacprzakmarek92@gmail.com | 📱 navitelogger | 🔗 <https://www.linkedin.com/in/marek-kacprzak-238053218/>

Personal Profile

Hands-on engineering leader combining team guidance, delivery management and software architecture across AI-enabled products, API-first platforms, data pipelines and distributed cloud systems. I currently lead engineering and security for a production automation platform, setting technical direction and quality standards while contributing directly in Python/FastAPI, data modelling, event-driven services, infrastructure and production reliability. Previous leadership includes cross-functional delivery, mentoring, onboarding, structured feedback, Scrum facilitation, budget tracking and stakeholder advising. I focus on creating clarity around ambiguous problems, growing engineering capability and balancing delivery speed with secure, scalable and observable systems.

Education

Warsaw University of Life Sciences

Computer Science Engineering Degree, specialisation: cybersecurity

Graduation year: 2027

Warsaw, Poland

October 2023 - Current

Work Experience

Confidential Client (under NDA)

Head of Software Engineering

Warsaw, Poland – Remote

January 2026 – Current

- Lead engineers and own roadmap, technical direction, delivery standards and security for a production AI-enabled automation platform spanning Python/FastAPI services, data workflows, frontend, event processing and cloud infrastructure.
- Allocate and prioritise work across backend, platform, security and operations; guide architecture and implementation, review changes, remove blockers and align engineering capacity with stakeholder priorities.
- Drive API-first services for source ingestion, asynchronous builds, artifacts, AI analysis, reporting, notifications and retention, with PostgreSQL workflow state, object storage and reliable integration contracts.
- Integrate LLM and agent capabilities through tool calls, structured outputs, validation, retries, traces, evaluation checks and human correction paths; use AI coding tools while maintaining review and test discipline.
- Establish reliability and security practices across CI/CD, observability, access, recovery and releases; built Kafka workflows verified at 100 events per second without failed writes.

IBM Polska

Brand Technical Specialist (promoted from Pre-sales Engineer)

Warsaw, Poland – Hybrid

October 2025 – Current

- Act as a technical advisor to enterprise stakeholders, turning business, data, integration and security requirements into solution architectures, AI proof points, PoCs, workshops, proposals and MVP plans.
- Coordinate customers, engineering, product, architecture and sales; surface constraints and risks, validate implementation options and bring customer feedback into product and solution decisions.
- Communicate complex architecture, scalability, performance, security and business value to technical and non-technical audiences.

Software Mind

Junior Delivery Manager

Warsaw, Poland – Hybrid

June 2025 – September 2025

- Led cross-functional delivery across fintech, SaaS and public-sector projects, covering requirements, Agile execution, SLA and risk monitoring, quality, testing, deployment support and performance reporting.
- Coached team members, introduced structured feedback and onboarding routines, facilitated workshops and supported collaboration across Poland and the Netherlands.
- Tracked budgets and engineering hours, prepared PMO-ready reports and improved operational processes through automation and shared knowledge bases.

OSEC – Open Source Education Center

IT Project Manager / Full-Stack Developer

Warsaw, Poland – Hybrid

January 2024 – June 2025

- Led Scrum and hybrid delivery of data-driven B2B applications, managing roadmap, backlog, sprint planning, retrospectives, risks, documentation, quality reviews and cloud releases.
- Built API and data components using Go, Python, Node.js, PostgreSQL and Redis while coordinating stakeholders, UX, developers and testers and providing transparent project-health reporting.
- Promoted engineering quality through code reviews, audits, automated tests, production monitoring, incident investigation, technical documentation and CI/CD.

Selected Data and Distributed Systems

Infrastructure Automation Platform

Remote
May 2026 – Current

Engineering Lead

- Own architecture and delivery of a private-cloud, API-first platform using Python/FastAPI, PostgreSQL, Kafka, object storage, Kubernetes, Terraform/OpenTofu, Ansible and Argo CD.
- Designed data ingestion and processing around immutable source snapshots, asynchronous builds, workflow state, deterministic caching, versioned storage, validation and artifact verification.
- Built event-driven distribution with transactional outbox, independent consumers, retries, dead letters, deduplication and backpressure; verified 6,000 events at 100 events per second without failed writes.
- Introduced observability, security scanning, signing, approval gates, automated rollback, backup, disaster recovery and adversarial testing.

Connexio – Geospatial Data and ML Platform

Warsaw, Poland
January 2026 – April 2026

Project Manager & Lead Full-Stack Engineer

- Led an API-first data platform using Python/FastAPI, PostgreSQL/PostGIS, Redis, Angular and Docker, defining the roadmap, architecture, data model and delivery phases.
- Built scheduled Python ETL for GTFS and OpenStreetMap ingestion, integrated routing engines and a Scikit-learn scoring pipeline, and maintained data integrity across update cycles.
- Delivered B2C/B2B APIs and interactive visualisations; query, cache and infrastructure optimisation kept complex endpoints below 300 ms P95.

Skills

Engineering Leadership	Technical strategy, architecture and code reviews, work allocation, mentoring, coaching, onboarding, structured feedback, delivery standards, quality governance, knowledge sharing and continuous improvement.
APIs & Distributed Systems	Python, FastAPI, Go, Node.js, REST, OpenAPI, service-oriented and microservice patterns, event-driven architecture, Kafka, queues, retries, idempotency, backpressure and concurrency control.
Data Platforms	PostgreSQL/PostGIS, MySQL, BigQuery, Redis and object storage; data modelling, ingestion, ETL, transformation, workflow state, parameterised SQL, caching, validation, indexing and scalable retrieval.
AI-Driven Development	LLM and agent integration, tool calls, structured outputs, prompt workflows, evaluation, validation, traces, retries and human review; AI coding tools integrated with review, testing and secure delivery.
Cloud & Reliability	AWS, GCP, Azure, Docker, Kubernetes, Terraform/OpenTofu, Ansible, Argo CD, GitHub Actions CI/CD, Prometheus/Grafana, reliability monitoring, observability, rollback and disaster recovery.
Business & Delivery	Agile/Scrum, roadmap and backlog management, resource and budget tracking, risks and dependencies, stakeholder advising, cross-functional facilitation, project reporting and process improvement.

Languages

English	Full working proficiency (C2-level certificate)
Polish	Native proficiency
Spanish	Limited working proficiency (B2 DELE certificate)
